## Camera Original Check — 7 of 7 checks passed

These checks are heuristics. They can flag signs of editing; they cannot prove a file is original.

TrimSafe 2.3.0 (36), offline

### All camera checks passed. Nothing looked wrong.

These checks are heuristics: they can flag signs of editing, they cannot prove a file is original. Every fact below was read from the file — nothing on this page was typed.

### ORIGIN

**Origin: nothing declared**

✓ **AI markers** — nothing declared

Origin: nothing declared. The file carries no marker of AI generation, which is not the same as being a camera original. Absence is not clearance: generators and messaging apps strip markers.

? **Content Credentials** — no Content Credentials — could not be answered

The file carries no Content Credentials, points at a manifest kept elsewhere that was not fetched, or carries one the validator could not settle — the value says which. Absence is not clearance. A manifest says who signed and what they declared; a file without one says nothing either way, and a stripped manifest leaves no trace.

### CAMERA CHECKS

✓ **Photos edits** — none

The Photos library holds no edit for this video.

✓ **Make / Model** — Apple · iPhone 17 Pro

The file names the device that recorded it.

✓ **QT creation date** — 14 Oct 2026 10:31:07

The file carries the capture date the camera wrote.

✓ **Encoder** — Apple

The file was written by Apple camera software, with no foreign encoder in its history.

✓ **Dates consistent** — Δ 0 s

The container's own clock agrees with the capture date — what a file looks like when nothing rewrote it.

✓ **GPS** — 39.9524000, -75.1636000

The file carries the coordinates it was recorded at.

SAMPLE

✓ **Duration** 18.40 s

The clip is long enough to trim.

## CONSISTENCY

### Consistency: nothing out of place

What this cannot see: a re-wrap with the same parameters, and a social network's transcode, are not told apart from an original. What this cannot see: a re-encode with the same settings can pass. Shown, not yet counted: the verdict stays the camera checks and Origin until these rows are measured on genuine iPhone originals.

✓ **Container layout** iPhone Camera · QuickTime movie

The file's box layout is one iPhone Camera writes, as the bundled table records it, with no other tool's box in it. What this cannot see: a re-wrap with the same parameters, and a social network's transcode, are not told apart from an original.

✓ **Keyframe cadence** a keyframe every 30 frames

Keyframes fall at a fixed interval, as a single encode writes them. What this cannot see: a re-encode with the same settings can pass.

## SOURCE FACTS

| | |
|---|---|
| **Device** | Apple · iPhone 17 Pro |
| **Capture date** | 14 Oct 2026 10:31:07 |
| **Container date** | 14 Oct 2026 14:31:07 UTC |
| **GPS** | 39.9524000, -75.1636000 |
| **Encoder** | 26.0.1 |
| **Codec** | HEVC |
| **Frame rate** | 30.00 fps |
| **Duration** | 18.400 s |

## NOTES

Observations set beside the checks. A note never refuses a file, is not one of the camera checks, and says what it cannot know.

Clock — The file's clock was set to UTC−04:00, within two hours of the sun's time at its longitude (about UTC−05:00).

Travel, or a phone kept on its home time zone, explains an offset; so does a zone drawn far from the sun's time. The note cannot tell which.

## SHA-256 FINGERPRINTS

**Source file** IMG_4821.MOV

`9b3e7d21c4a8f06e5d19b7a3c2e4f8d06a1b9c3e7f25d48a0b6c1e9f3d7a2b54`

**Verified export** 39.9524000_-75.1636000_2026-10-14_10-31-07.mov

`4f1c9a7e02b65d38e9a0c7f41b2d86e53a9f0c1d7e48b26a5f3c90d1e7b84a62`

A fingerprint lets anyone confirm a file is byte-identical to the one this report describes. It is not a cryptographic signature and proves nothing about who made the file.

## EXPORT

| | |
|---|---|
| **Window** | 12.000 s from 3.000 s |
| **Read back** | 12.000 s (7200/600) |

| | |
|---|---|
| **Codec written** | HEVC |
| **GPS** | 39.9524000, -75.1636000 — matches source |
| **Capture date** | 14 Oct 2026 10:31:07 — matches source |

## CONTACT SHEET

12 frames from the exported window, at the times shown.

## WHAT THIS REPORT IS

These checks are heuristics. They can flag signs of editing; they cannot prove a file is original.

This report records what the file said about itself at the moment it was read. It is not a chain of custody and it is not evidence.

This document allows printing and copying; editing is restricted. That restriction is a convention, not a seal — the fingerprints above are the part anyone can independently confirm.
